

## THE KUGLER DIFFERENCE

Superior protection from disease with up to 4x the chloride of competitive formulas. High quality Kugler KS156C is formulated to suppress disease while still delivering slow-release N, P and K to your crop fertility program. Regardless of the application—foliar or aerial—you'll see the Kugler difference.

FERTILIZERS

### Kugler Company

**We make them. We sell them.  
And nobody does it better.**

Kugler is a family owned, Midwest based fertilizer company that has been helping agricultural producers succeed for decades. The foundation of that success is based in Kugler's company-wide commitment to the highest quality—from manufacturing to delivery to application, to the training and education we provide your local Kugler KQ dealer, to the innovative, leading-edge technology we bring to the fertilizer industry.

**Discover more about how Kugler quality can put your farming operation in step with the rest of your modern farming practices.**

## SUPERIOR DISEASE PROTECTION WITH A SLOW-RELEASE NUTRIENT PACKAGE

### THE IDEAL DISEASE SUPPRESSION PACKAGE

Chloride is essential for photosynthesis and is important in moisture retention within the plant tissue. Research has shown that chloride has an important role in suppression of fungal leaf and root diseases. KS153C provides suppression from such diseases as leaf rust, stripe rust, tan spot, powdery mildew, spot blotch, take-all, septoria and common root rot.

### SLOW-RELEASE NITROGEN FOR MAXIMUM PERFORMANCE

The slow-release nitrogen component of KS153C helps reduce leaching and volatilization of nitrogen. It keeps the essential nutrients in place, staying on the job in foliar applications up to twelve weeks. This means your wheat or barley crop get the continual boost of nutrients they need along with sustained nitrogen availability for improved performance.

### COMPLETE APPLICATION FLEXIBILITY

Kugler KS153C is designed to be applied foliar either by aerial or ground equipment. It can be applied alone, or tank mixed with liquid fertilizers or compatible pesticides. Kugler recommends using a jar test to check compatibility. The addition of slow-release nitrogen to KS153C allows for safe and efficient entry of the chloride into the plant thus eliminating any phytotoxicity problems.
