PERFORMANCE

KUGLER KQ2517™

HIGH POTASSIUM PLUS SULFUR FOR POWERFUL, VERSATILE PERFORMANCE

Powerful potassium that goes right to the roof of outstanding yields.

Kugler KQ2517 is a chloride-free clear liquid grade of potassium and sulfur (0-0-25-17S) — your first choice for helping your crop get up and growing fast, overcome nutrient deficiencies, and improve grain quality and yield.

Application versatility.

Kugler KQ2517 can be applied as a starter, banded, side-dressed, foliar applied or added through your irrigation water. You can combine Kugler KQ2517 to fortify other starter fertilizers to deliver maximum K and S efficiency. Kugler KQ2517 is also an excellent carrier for micronutrients and pesticides for unmatched single application performance.

Low salt-out temperature.

Kugler KQ2517 is especially suited for use in cold weather. Its superior quality and 100% water solubility make Kugler KQ2517 perfect for all types of irrigation systems — with complete incorporation and no plugging.

Reduced nitrates, stronger plants.

Kugler KQ2517 helps reduce the levels of nitrates and non-protein nitrogen in the plant. Additionally, root growth, drought resistance and water efficiency are enhanced — and Kugler KQ2517 even aids in the decomposition of crop residue to improve your no-till, low-till or strip-till management.

High potassium analysis.

With a 25% analysis of potassium, Kugler KQ2517 is especially suited to focused fertility programs

requiring high rates of potassium.

Excellent sulfur source.

Kugler KQ2517 is also an excellent source of sulfur. In fact, Kugler manufactures its own sulfur products, so you have the added assurance that Kugler quality is an even greater component of your fertility program.
