

WHAT GROWERS ARE SAYING ABOUT KUGLER FERTILIZERS:

"I have used competitive products that were supposed to be foliar feed products that actually burned my corn up; but I haven't had that happen with Kugler, and I don't expect it to. I think all of their products are great products...the way Kugler formulates their products will give you an advantage in that you're going to meet more plant needs to help the plant through stress."

Rex Waugh • Arapahoe, CO

"I just put one gallon of KQ-XRN and one pint of MicroMax on soybeans. I noticed a healthier plant with better drought tolerance. There was a yield increase of five to six bushels and it stimulated more pod development."

Dan Nelsen • Moorefield, NE

"Kugler works really well because it's low salt and non-corrosive on the equipment. It's a good quality product and doesn't plug up the nozzles or orifices. If you're not stopping to unplug things, you're getting things done."

Lynn Cooper • Osborne, KS

"The Roundup® beans really need some manganese and that's what I'm really going for with Kugler MicroMax. I'm trying to get as much early plant health as possible. The healthier you keep those plants, the more they are going to produce."

Terry Long • Lebanon, KS

FERTILIZERS

**We make them. We sell them.
And nobody does it better.**

Kugler is a family owned, Midwest based fertilizer company that has been helping agricultural producers succeed for decades. The foundation of that success is based in Kugler's company-wide commitment to the highest quality — from manufacturing to delivery to application. From the training and education we provide your local Kugler KQ dealer to the innovative, leading edge technology we bring to the fertilizer industry.

Discover more about how Kugler quality can put your farming operation in step with the rest of your modern farming practices. Visit with your local authorized Kugler KQ dealer or contact us:

KUGLER KS2075

K AND S — ALONG WITH THE INDUSTRY'S LEADING SLOW RELEASE NITROGEN.

Kugler KS2075 is a clear liquid fertilizer containing Kugler KQ-XRN slow release nitrogen with a superior potassium and sulfur solution — a great combination for providing key nutrients to your crop throughout the growing season.

Kugler KS2075 may be applied as a foliar spray, soil applied or injected through an irrigation system. The outstanding, consistent quality provides trouble-free application and a crop-safe formulation that won't cause burning. Kugler KS2075 is equipment-safe for sprayers, pivots and aerial application.

Kugler KS2075 provides a chloride-free, safe and efficient source of potassium and sulfur to address specific agronomic and nutrient needs in your crop. Kugler KS2075 mixes readily with insecticides and herbicides, allowing you to save time and labor by making just one pass through the field. You can address threats to your crop, while giving your plants a fertilizer boost at the same time.

Applying Kugler KS2075 through your pivot is a great way to

boost nitrogen at mid- and late season growth stages. This is especially important when your crops are water-logged due to excessive rains or damaged by wind or hail. A shot of Kugler KS2075 helps your crop better manage these stressful conditions and optimize yields.

Formulated with Kugler KQ-XRN Technology

Kugler KS2075 includes Kugler KQ-XRN Technology, our proprietary slow release nitrogen that has rapidly become a leader in the marketplace. Kugler KQ-XRN Technology keeps high quality nitrogen available to the plants longer, helping sustain growth over the long term without the surges that can adversely affect plant health and quality.

Many growers are using Kugler KQ-XRN slow release nitrogen as the Perfect Delivery System™ for Kugler KS micronutrients and for pesticides and fungicides in foliar application. Kugler KQ-XRN has a unique “stickiness” that keeps it on plant leaves for weeks — allowing for greater nutrient absorption and increased effectiveness. At the same

time, Kugler KQ-XRN has tremendous flowability and quality that makes it easy to apply — without gumming up nozzles. (For more information on KQ-XRN, visit www.KQXRN.com.)

Kugler Fertilizers: Perfect for Foliar Application

Tests have shown that up to 90% of a foliar fed nutrient solution can be found in the smallest root of a plant within 60 minutes of application. Kugler KQ-XRN and KS fertilizers are especially well suited for foliar application. Foliar application of fertilizer allows you to provide essential nutrients to your crop well into the growing season — giving you the opportunity to boost plant performance at critical stages of growth.

Foliar application of Kugler fertilizers allows you to fine tune your fertility program in response to weather conditions and crop performance — and do so with effective, crop-safe fertilizers. Kugler fertilizers are formulated to prevent crop damage (burning). They are also easy on application equipment — from ground sprayers to airplanes.

July
Yellowing corn prior to application of Kugler KS2075.

July
Robust green corn (no yellowing) one week after application of 2 gal/acre of Kugler KS2075.
