KUGLER KQ652...

New High-Phosphorus Starter With Kugler Quality

With Kugler KQ652, you apply more phosphate without increasing the gallons of fertilizer; that means fewer fill-ups and more time planting. You apply more plant food units using the same gallons and same equipment you've always used. It all adds up to greater efficiency and labor savings, and best of all,

ATS:

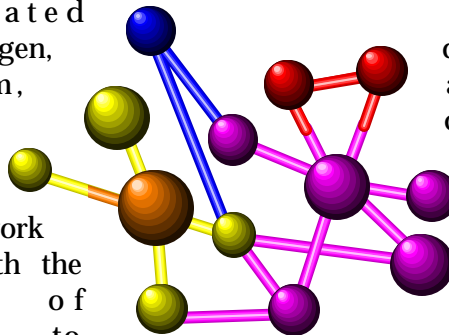

Nitrogen Stabilizer in Every Kugler KQ Grade

Every Kugler KQ fertilizer contains ammonium thiosulfate - an economical effective nitrogen stabilizer which helps reduce nitrogen loss due to leaching, denitrification and volatilization. As a result, more nitrogen is available to your plants and the balance of

N-K-S-Zn MORE THAN JUST

In addition to higher phosphorus levels, KQ652 contains four other essential nutrients in concentrated levels - nitrogen, potassium, sulfur and zinc. These nutrients work together with the "power of synergism" to improve the effectiveness of your starter program. Only Kugler is able to offer this combination of

nutrients in these ratios; no one else can offer a starter fertilizer like KQ652 - so don't settle for anything less.

Kugler's high-quality standards and innovation continue with new grades. You are assured of easy application and unmatched flowability.

Today's high performance hybrids and precision production methods demand a new approach to fertility. KQ652 - and the other

KUGLER KQ663...

High Nitrogen Starter to Promote Early Plant Growth

Kugler KQ663 is a high-nitrogen starter with nitrogen and phosphate in a 1-1 ratio of nitrogen and phosphate to give your crop an advantage from the day you plant.

Plus KQ663 adds sulfur, potash and zinc - working together to improve your crop's early nitrogen uptake.

KQ663 is specially formulated for crops that perform best with

high nitrogen at planting and makes the most of today's hybrids and management practices for optimum performance.

KQ663 is the premium high-nitrogen fertilizer grade that can

KUGLER KQ353...

Clearly Superior to Straight Nitrogen

This superior liquid grade of nitrogen solutions. nitrogen, potassium, sulfur and zinc far outperforms simple split application on corn, soybeans, sorghum or any other

crop on which you've been using straight nitrogen. Use KQ353 at pre-plant, sidedress, through pivots and throughout the growing season.

Split applications of KQ353 will provide essential nutrients at the precise times your crop needs them most, and it will consistently produce better yields and higher protein content compared to straight nitrogen. KQ353 is a quality, versatile fertilizer that is right in step with today's changing and challenging fertility

KQ STANDS FOR KUGLER QUALITY

As the leader in modern fertilizer manufacturing processes, it is our goal at the Kugler Company to provide the highest quality products available.

As a KQ Dealer, each dealer has

pledged to handle only Kugler KQ products - that's your assurance that you receive quality KQ fertilizers.

Kugler promises to continue providing high-quality fertilizers and to keep our dealers on the leading edge of fertilizer

FOOD FOR THOUGHT...

The new grades that the Kugler Company introduced this season are just another step of our commitment to our growers. It always seems that when we introduce a new grade our competitors soon follow with a grade "that is just as good as" or "about the same thing as." We will keep introducing new grades, and our competitors will keep

copying, but they will never equal the Kugler quality or commitment. But it really doesn't make any difference how many PHOS grades are introduced if they aren't banded or placed near the root zone.

Liquid or dry phosphate, if it is broadcast, it is not nearly as effective as if it were banded. Kugler PHOS grades were meant

to be placed!

Quality is introduced into the equation as placement equipment demands quality. You can't afford to spend time cleaning screens or plugged orifices instead of planting. With Kugler PHOS grades you spend more time planting or dual applying than cleaning equipment. So the next time you want a total fertility program, see your authorized KQ dealer for a program that will not only increase your yields, but also
