

KUGLER KQ *facts* fertility

Starter-Grower Edition - Spring 2001

Special circumstances require special Kugler KQ starter fertilizers.

The Kugler reputation for fertilizer innovation began with Kugler KQ555™, the original multi-nutrient starter that changed the rules in fertility. Kugler KQ555 continues to be the flagship brand for Kugler, but we continue to innovate—constantly pushing the envelope to discover new and better ways to make your fertility program more effective.

Your authorized Kugler KQ dealer offers a number of superior starter fertilizers. Here are two specialty grades we offer to address specific challenges in terms of soil nutrient levels, management practices and new hybrids:

Kugler KQ652: High phosphorus starter

Now you don't have to apply more gallons of fertilizer to reach desired phosphorus levels. With Kugler KQ652, you save on fill-ups and on-farm storage—and that saves time and money without sacrificing the phosphorus levels your crop needs.

Phosphorus enhances root development so your crop can take

up nutrients more readily. That means the plants are better able to compete with weeds, insect and stress.

Kugler KQ663: High nitrogen starter

With nitrogen and phosphate in a 1:1 ratio, this quality Kugler grade gives your crop a boost from the time you put seed in the ground. Higher nitrogen levels in Kugler KQ663 promote early plant growth—and with its additional nutrients, this Kugler product clearly outperforms straight nitrogen.

Like all Kugler KQ fertilizers, these two specialty starters are formulated for easy application—with no plugging and no settling out. In other words, you spend your time on the tractor instead of cleaning equipment.

Your fertility program is unique to your operation, your yield objectives and your management methods. That's why you should do business with your local authorized Kugler KQ dealer. You'll be working with a partner who is committed to your success—because he'll be here next year to answer to you.

What's smarter?
Getting more land. Or
getting more from the
land you already have?

Some think success means getting bigger. Of course, that means more land—more loans, more interest, more equipment, more time.

Or you can simply get better. Taking the ground you already have—and making it more productive.

What would happen if you took that marginal ground in your operation, and increased yields by, say, ten or fifteen percent? It can happen if you match your fertility program to your land, your crop and your management—and if you talk with your authorized Kugler KQ dealer, your hometown fertilizer expert.

You're already going over that ground with some sort of fertilizer. With no more time, no more work—you could end up getting more out of the land you have. Just by changing what you're applying—and when you apply it.

Discover more by talking with your authorized Kugler KQ dealer. When you've seen just how your hometown Kugler KQ dealer can help you get more out of what you already have—then, maybe, you can think about getting bigger. Because you'll already know how to do things better.

Sampling and Product Analysis

With fertilizer products in short supply, Kugler recommends that you take the time to fully understand the guaranteed analysis of the fertilizer you purchase. To make certain you get the amount of nutrients you are requesting, remember to ask these questions:

- What is the product analysis? (Usually stated as N-P-K-S-Zn)
Example: 8-20-5-5-5 or 28-0-0-5
- How many gallons per acre are being applied?
- How does this relate to the amount of nutrients requested?
- If the product contains zinc, is it being added as an efficiency ratio or is it sold as actual amount of nutrient?

Saving a sample of the product assures that your product is as represented. Having the sample analyzed is a very cost-effective method to make sure your fertilizer dollars are well spent.

Remember the old adage, "if it looks too good to be true, it probably is..."

Kugler and its Authorized Dealers work hard to make certain that you receive the product and nutrients that you request. As the liquid fertilizer leader, Kugler guarantees you a quality "on-grade" product every time.
